& BIRD SANCTUARYSM

INTERACTIVE SCAVENGER HUNT

**Share your nature adventure on Facebook or
Instagram and tag us. We can help you identify
what you saw!**

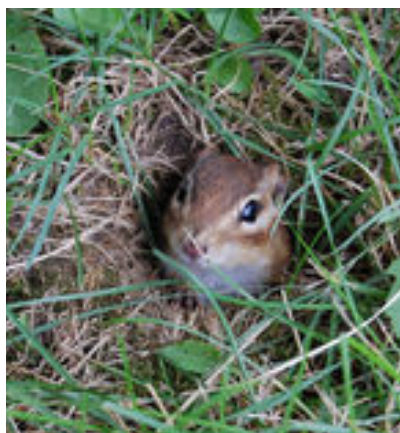

Facebook: Cora Hartshorn Arboretum

Instagram: @harthornarboretum

Please stay on trails and only take pictures.

How many chipmunk
holes can you find on
your hike?

Chipmunks help disperse
seeds throughout the
forest. Can you hear any of
them calling with their high
pitched "CHIP"?

Look for a Mourning Cloak
Butterfly.

These butterflies spend the
winter in their adult state
hibernating under rocks and
wood piles.

Find a plant that has
buds on it.

Buds are the first stage of
development for a leaf,
flower, or shoot.

& BIRD SANCTUARYSM

Find a tree stump
where you can see the
rings.

Each dark ring indicates a
year: the more space
between the rings the
more the tree grew that
year.

Look for Mining Bee
homes, they look like little
volcanoes in the dirt.
These bees are not aggressive
and typically don't sting, they
live underground, and help
pollinate our plants.

Listen for Birds, you will need
to be quiet for this.

Try to get a picture of a bird or a
recording of a call and we can ID it
for you.

Find a Mushroom and try to
draw it.

Mushrooms are not plants or
animals - they are part of their own
kingdom: Fungi.

Donations are greatly appreciated. Donations can be left through the mail slot
at the front or done through our website.
